

SIMPLE STEPS TO TEST YOUR CATTLE

1. Call API for sample collection and shipping protocols.
2. Collect a serum sample.
3. Ship the samples to the API laboratory.
4. Results will be reported directly to you and/or your veterinarian.

ABOUT US

Animal Profiling International, Inc. is an American company dedicated to the improvement of animal health management through risk-assessment technologies and advanced animal identification systems. API has tested over 2 million head of cattle for Bovine Viral Diarrhea (BVD) and currently services clients in over 40 U.S. states.

API's industry experts provide the products and services that operators in the beef, dairy and food supply industries need to make their jobs easier, more efficient, and more profitable while upholding the company's goal of improving animal health, performance, and management techniques.

EarlyPreg28

EarlyPreg28 is a blood-based pregnancy test designed to detect pregnancy in cattle as early as 28 days post-insemination without invasive palpation.

EarlyPreg28 offers cattle operations the unique opportunity to detect pregnancy earlier and with greater accuracy over traditional pregnancy testing methods while also reducing the risks of pregnancy loss due to palpation or ultrasound trauma. Additionally, the test provides producers and operators further time flexibility, allowing them to test for pregnancy on their own schedules.

Q. WHAT IS EarlyPreg28?

A. EarlyPreg28 is a preferred means of pregnancy detection in cattle. The benefits to using the EarlyPreg28 test include:

- Accurate results 28 days post-breeding
- Convenient and versatile, allowing you to schedule pregnancy testing when it fits your schedule
- Cost-effective and an easier method for checking pregnancy than ultrasound or rectal palpation
- Non-invasive and Embryo safe, reducing the risk of damaging a pregnancy and causing embryo loss

Q. WHY EarlyPreg28?

- Provides flexibility in scheduling pregnancy testing dates
- Fits within synchronized breeding protocol
- Accurate results 28 days post-breeding
- Safe for embryo

** EarlyPreg28 is performed with the IDEXX Bovine Pregnancy Test.*
